2 Invoice + SRV Procedure Manual

Step-by-step workflow, Epicor PO/SRV, scanning & naming.

Invoice + SRV Procedure Manual

Step-by-step guide for daily invoice handling, Epicor PO/SRV, scanning and naming.

Daily handover	Reception (Hafiz) gives invoices usually around 4:00pm (sometimes earlier). Urgent invoices may come anytime (advance payment).
Goal	Keep workflow moving with correct Status, correct Attention, correct attachments, and correct scanning/renaming.
Key rule	**No function changes:** this manual is procedure + where to click.

People / Roles

Person	What they do
Hafiz (Reception)	Hands over invoices; usually enters them in the system first.
Site DC	Creates SRV for supply/delivery invoices (when status is **For SRV**).
GIO (Accounts)	Handles IPC/subcontract calculations and returns Finance Report.
Eng. E. Ali	Engineer approval after SRV is ready.
Mr. Hamad	CEO approval step (summary note when needed).
Accounts team	Final processing after **With Accounts**.

IBA Trading - Workflow Overview (Context)

This page explains who does what and how invoices move from Site to Head Office until payment.

Key roles (who handles what)

Role	Who (example)	Main responsibilities in IBA
Reception / Desk	Hafiz (Reception)	Receives supplier invoices, registers them in IBA, and hands the originals to Head Office team.
Site Engineer	Project / Site Engineer	Manages site works and approvals. Confirms progress for IPC (Interim Payment Certificate) and signs/approves site documents.
QS (Quantity Surveyor)	QS / Commercial	Calculates progress for IPC (percent complete) and prepares the Interim Payment Certificate value.
Site DC	Site Document Controller	Coordinates between Site and Head Office. Handles submittals, approvals, delivery follow-up, requests, attendance/admin, and creates SRV for supply/delivery invoices.
Procurement	Procurement team	Receives PR from Site DC, collects supplier quotes, negotiates, prepares PO, and follows internal approvals before sending PO to supplier.
Accounts	Accounts (GIO)	For IPC: checks previous payments, prepares Finance Report (previous paid + to be paid), validates amounts, and supports payment preparation.
COO	Engr. Ali	Operational check of SRV/Invoice/PO package. Confirms completeness and correctness before CEO approval.
Finance Manager	Mr Mustafa	Finance validation and control on payments and supporting documents.
CEO	Mr Hamad	Final payment approval and signature before Accounts processes payment.

Procurement flow (PR -> PO -> Invoice)

1) Site DC creates a **PR (Purchase Requisition)** for items/works needed on site.
2) Procurement collects offers, negotiates with suppliers, and prepares the **PO (Purchase Order)**.
3) PO is validated internally (COO) and approved (CEO), then sent to supplier via Reception.
4) When supplier delivers/executes (partial or full), the supplier issues an **Invoice** against the PO.
5) The invoice then follows the invoice workflow (next page).

Invoice workflow (from Reception to Payment)

Main idea: Always move the invoice to the correct route early: Normal supply/delivery, IPC (progress), or Advance Payment.

Step-by-step (high level)

1) Receive & Register: Reception receives invoice, registers it in IBA, and hands original to Head Office.
2) Under Review (Head Office): Verify details (date, amount, PO, site/DC). Save as **Under Review** to generate file name. Scan and rename using Invoice Records.
3) Choose the correct route:
• **Normal supply/delivery** -> Set **For SRV** and send to **Site DC** (they create SRV).
• **IPC (progress)** -> Set **Report** and send to **Accounts (GIO)**. Accounts checks previous payments and prepares Finance Report.
• **Advance Payment (urgent)** -> Adjust PO lines if needed and create SRV immediately (Epicor).
4) SRV / Package building: Attach **SRV + Invoice + PO** + (DN if supply) + **Finance Report** (if IPC).
5) Approvals: COO checks -> CEO approves -> With Accounts -> Accounts processes payment.

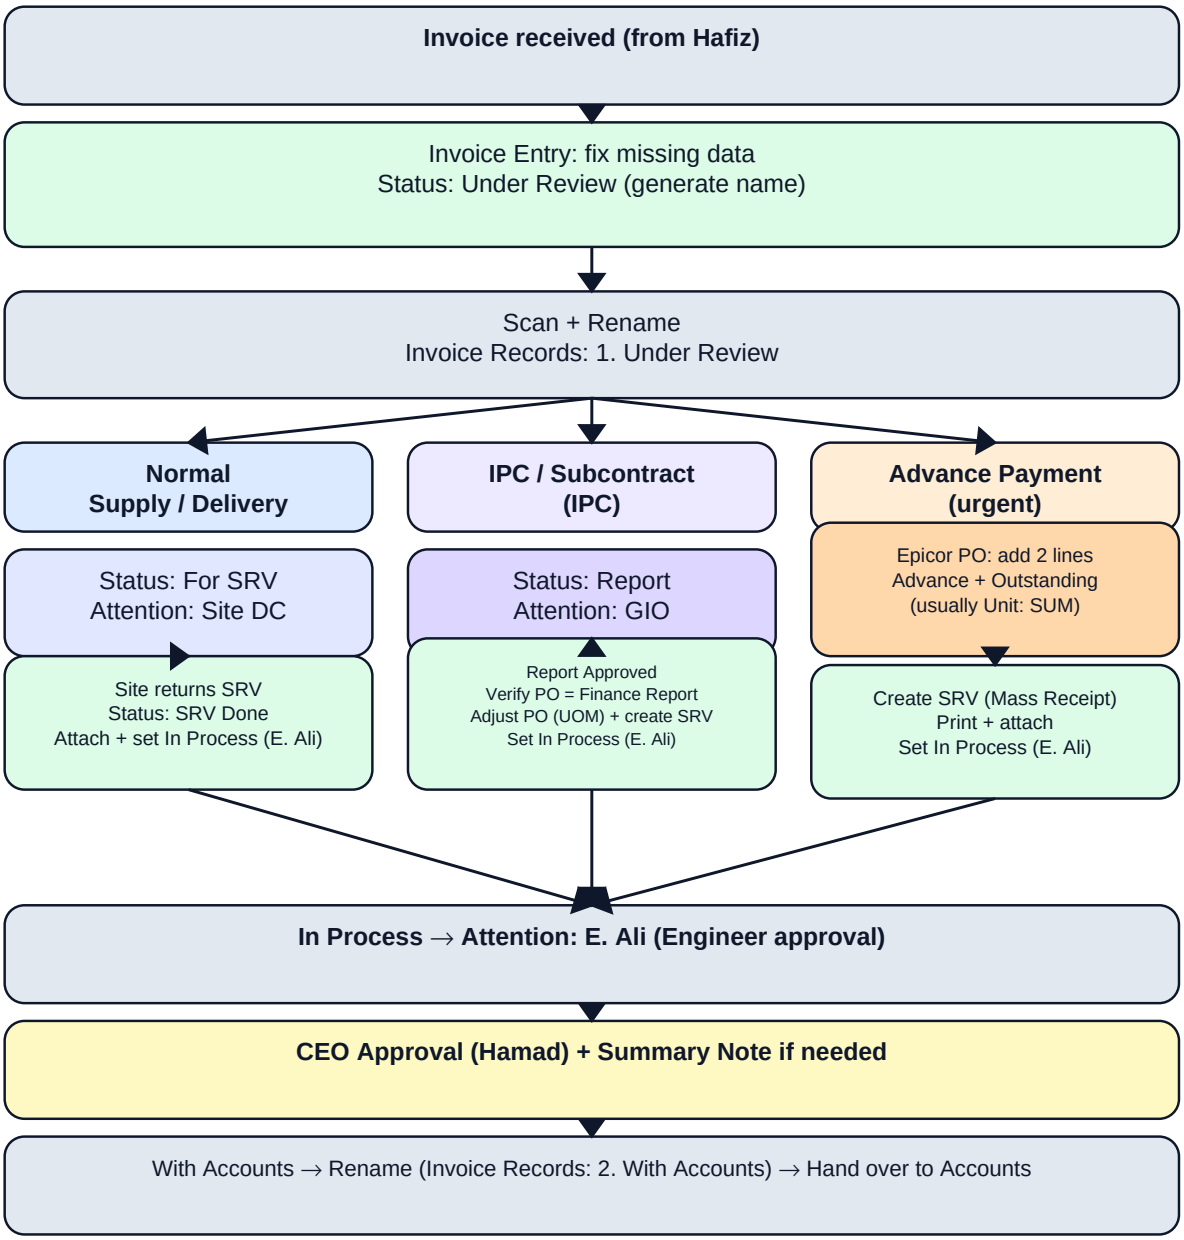
Simple route map

Route	Trigger	Next owner	End result
Normal supply/delivery	Invoice is delivery/supply (no IPC)	Site DC	SRV created by site, then COO -> CEO -> Accounts
IPC (progress payment)	Invoice has IPC / progress certificate	Accounts (GIO)	Finance Report -> SRV -> COO -> CEO -> Accounts
Advance Payment (urgent)	Supplier requests advance payment	Head Office (Epicor)	PO adjusted -> SRV -> COO -> CEO -> Accounts

Note: The detailed button clicks and status changes are documented in the next pages of this manual.

Quick Status Flow (Reference)

Use this map to confirm the correct status and next action.



1) Daily invoices from Hafiz (New Entry)

Where in the system: Invoice Management → New Entry / Invoice Entry

Start here every day:

1. Open Invoice Entry and check the side panel list (Hafiz should have entered the invoice).
2. Open the invoice and verify basics Hafiz may miss: date, invoice amount, supplier, PO number, Site/DC, etc.
3. Save with status **Under Review** so the system generates the invoice PDF name.
4. Scan the hardcopy invoice and rename the PDF using the generated name.

Scanning and renaming (where to get the name)

Where in the system: Invoice Management → Invoice Records → Button “1. Under Review”

After saving as Under Review, go to Invoice Records and click **1. Under Review** to copy the generated names for scanning/renaming.

Decide the route (choose ONE)

If the invoice is…	Set status to…	Attention…	Next
Supply / Delivery (normal vendor invoice)	**For SRV**	Select correct **Site DC**	Wait for SRV from site
IPC (Invoice Interim Certificate / subcontract)	**Report**	**GIO**	Wait for Finance Report from GIO
Advance payment (urgent)	**Under Review** (then SRV process)	-	Do Epicor PO edit + create SRV immediately

2) Normal supply / delivery invoices (For SRV → Site DC)

Where in the system: Invoice Management → Invoice Entry (status & attention)

After scanning/renaming:

1. Change status from **Under Review** to **For SRV**.
2. Set **Attention** to the correct **Site DC** (based on site/DC).
3. Save and wait for the site to return the SRV.

When SRV is returned from site

The site typically changes status from **For SRV** to **SRV Done**. When you receive the SRV file:

1. Attach the SRV file to the original invoice entry.
2. Find the original hardcopy invoice in the folder (blue label).
3. Staple in this order: **SRV + Invoice + (DN if supply) + original PO**.
4. Change status to **In Process** and set Attention to **E. Ali**.

Attachments checklist (Normal supply/delivery)

Required attachment	Notes
Invoice (INV)	Hardcopy + scanned PDF renamed from “1. Under Review”.
SRV	Returned from site (must be attached before In Process).
Delivery Note (DN)	Supply invoices should have DN (sometimes missing — follow up).
Original PO	Always attach.

3) IPC / Subcontract invoices (Report → GIO)

Where in the system: Invoice Management → Invoice Entry (status & attention)

IPC invoices (Invoice Interim Certificate) must go to Accounts for calculation.

1. Change status to **Report**.
2. Set **Attention** to **GIO**.
3. Save and wait for the Finance Report return.

When Finance Report is returned

1. Scan the Finance Report page and attach it to the invoice entry.
2. Change status from **Report** to **Report Approved** (so the system generates the report file name).
3. Rename the scanned Finance Report using the generated report name (Invoice Records → **Finance Report (Optional)**).

Making SRV for IPC (Important: PO value must match)

Where in the system: Epicor → Purchase Order (PO) + Receipt Entry / SRV

Before creating SRV for IPC, ALWAYS confirm these values match:

• Finance Report PO Value (from GIO) • Invoice amount (IPC payable) • Epicor PO total/value

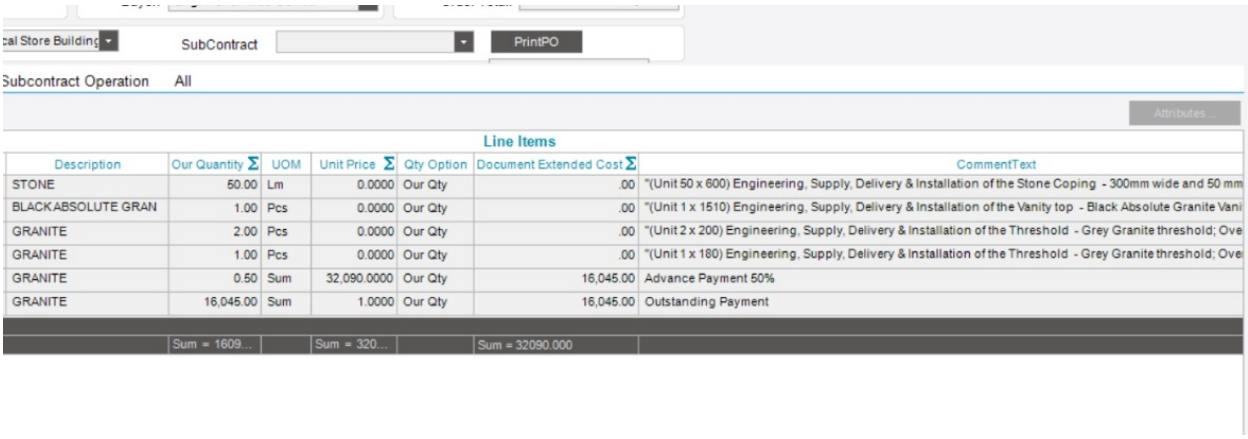
If Epicor PO value is **less** than the Finance Report PO Value → adjust the Epicor PO first.

How to adjust the Epicor PO correctly (based on UOM)

UOM type	What to do	Example
SUM	Add missing amount directly to the SUM line (or add a SUM line).	Finance Report: 50,000 Epicor PO: 48,000 **Missing:** 2,000 → add +2,000 to SUM
Not SUM (pcs / m² / days / hours / months…)	Convert missing amount to the correct Qty using: **Qty = Amount ÷ Unit Rate**	Missing: 12,000 and Rate: 150 per m² → Qty = 12,000 ÷ 150 = **80 m²** Missing: 5,000 and Rate: 250 per day → Qty = **20 days**

After updating Qty/amount, re-check that the **Extended Cost** matches the Finance Report value.

Epicor PO example (lines area)



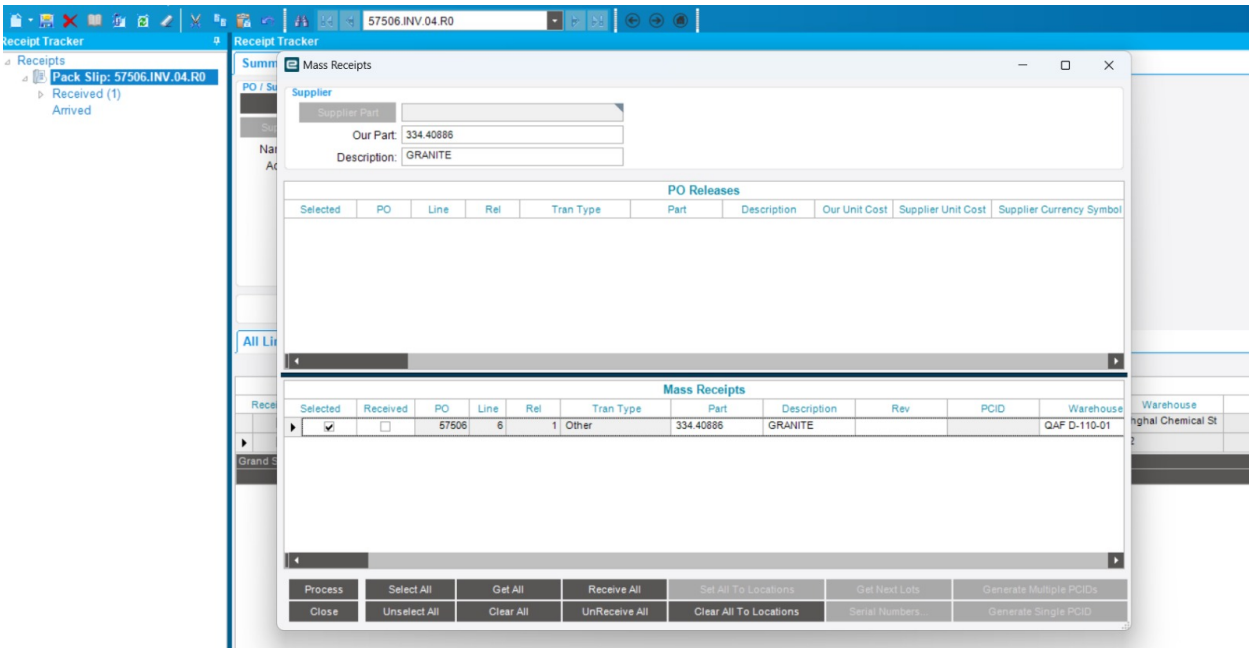
Description	Our Quantity Σ	UOM	Unit Price Σ	Qty Option	Document Extended Cost Σ	CommentText
STONE	50.00	Lm	0.0000	Our Qty	.00	"(Unit 50 x 600) Engineering, Supply, Delivery & Installation of the Stone Coping - 300mm wide and 50 mm
BLACK ABSOLUTE GRAN	1.00	Pcs	0.0000	Our Qty	.00	"(Unit 1 x 1510) Engineering, Supply, Delivery & Installation of the Vanity top - Black Absolute Granite Vani
GRANITE	2.00	Pcs	0.0000	Our Qty	.00	"(Unit 2 x 200) Engineering, Supply, Delivery & Installation of the Threshold - Grey Granite threshold; Ove
GRANITE	1.00	Pcs	0.0000	Our Qty	.00	"(Unit 1 x 180) Engineering, Supply, Delivery & Installation of the Threshold - Grey Granite threshold; Ove
GRANITE	0.50	Sum	32,090.0000	Our Qty	16,045.00	Advance Payment 50%
GRANITE	16,045.00	Sum	1.0000	Our Qty	16,045.00	Outstanding Payment
	Sum = 1609...		Sum = 320...		Sum = 32090.000	

Epicor: Create SRV (Receipt Entry → Mass Receipt)

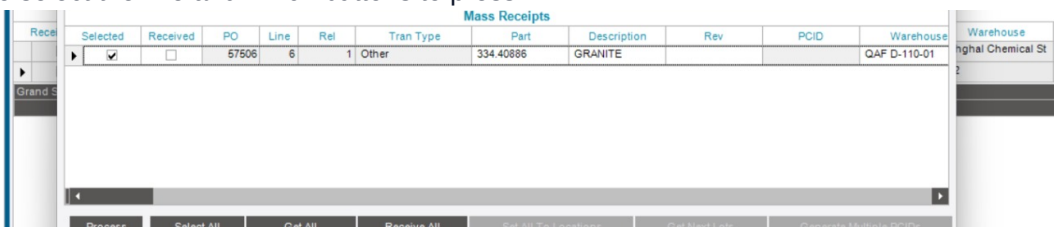
Where in the system: Epicor → Receipt Entry / SRV → Actions → Mass Receipt

1. Open **Receipt Entry / SRV** and search by **PO number**.
2. Click **Packing Slip** and review previous entries (helps if someone added but did not release).
3. Go to **Actions** → **Mass Receipt**.
4. In the popup, find the correct PO line and go to **Our Qty**.
5. Enter the required Qty/amount and confirm the totals are correct.
6. Only then click **Process**.
7. Print the SRV and attach it to the invoice hardcopy.

SRV example (Mass Receipts)



Zoom: where to select the line and which buttons to press



4) Advance payment (Urgent)

Where in the system: Epicor → Purchase Order (PO) + Receipt Entry / SRV

Advance payment invoices are urgent because Accounts needs SRV to prepare payment.

A) Confirm Hafiz entered it

1. Check Invoice Entry side panel list. If missing, ask Hafiz to enter.

2. Open the invoice, correct missing date/amount, then save as **Under Review** to generate the invoice name.

B) Epicor PO: add 2 lines (Advance + Outstanding)

Why: to split the PO so Accounts can pay the advance payment now.

1. Go to Epicor **Purchase Order** and open the PO.

2. If PO has only 1 line, add **two lines**:

• Line: **Advance Payment** (percentage amount) • Line: **Outstanding Payment** (remaining amount)

3. Best practice: set Unit to **SUM** so calculations are clear (lump sum).

Purchase Order example (showing the two lines)

Line Items

Description	Our Quantity Σ	UOM	Unit Price Σ	Qty Option	Document Extended Cost Σ	CommentText
STONE	50.00	Lm	0.0000	Our Qty	.00	"(Unit 50 x 600) Engineering, Supply, Delivery & Installation of the Stone Coping - 300mm wide and 50 mm
BLACK ABSOLUTE GRAN	1.00	Pcs	0.0000	Our Qty	.00	"(Unit 1 x 1510) Engineering, Supply, Delivery & Installation of the Vanity top - Black Absolute Granite Vani
GRANITE	2.00	Pcs	0.0000	Our Qty	.00	"(Unit 2 x 200) Engineering, Supply, Delivery & Installation of the Threshold - Grey Granite threshold; Ove
GRANITE	1.00	Pcs	0.0000	Our Qty	.00	"(Unit 1 x 180) Engineering, Supply, Delivery & Installation of the Threshold - Grey Granite threshold; Ove
GRANITE	0.50	Sum	32,090.0000	Our Qty	16,045.00	Advance Payment 50%
GRANITE	16,045.00	Sum	1.0000	Our Qty	16,045.00	Outstanding Payment
	Sum = 1609...		Sum = 320...		Sum = 32090.000	

C) Create SRV immediately

Follow the SRV steps (Receipt Entry → Packing Slip → Actions → Mass Receipt). Select the **Advance Payment** line, then **Receive All** and **Process**.

Print SRV and attach to invoice hardcopy.

5) Approvals → CEO → With Accounts (final handover)

After SRV is ready and all attachments are complete:

1. Status **In Process** → Attention **E. Ali** (Engineer approval).
2. After Engineer approves → change to **CEO Approval** (Mr. Hamad).

Summary Note rule

If multiple invoices / POs are going to CEO with the **same supplier**, create a Summary Note.

Default format: **Supplier Name + today's date** (example: "ABC Company 17-Jan-2026").

No summary is needed for IPC invoices or invoices that are alone (single supplier item).

After CEO approval

1. Change status to **With Accounts** (no Attention needed).
2. Go to Invoice Records and click **2. With Accounts** to copy the final SRV package names.
3. Rename scanned SRV/attachments using the generated names.
4. Hand over the complete file to Accounts team.

Final attachments checklist (before handing to Accounts)

Must be attached	Notes
SRV	Printed + scanned (if required) and attached in the system.
Invoice (INV)	Original hardcopy + scanned PDF renamed correctly.
Original PO	Always included in the stapled pack.
DN (Delivery Note)	Required for supply invoices (follow up if missing).
Finance Report (for IPC only)	Scan + rename after Report Approved.

Common mistakes to avoid

- Forgetting to save as **Under Review** (name will not generate).
- Sending IPC invoice to Site DC instead of **Report** → **GIO**.
- Creating SRV for IPC before Epicor PO matches the Finance Report value.
- Missing attachments in the hardcopy pack (SRV + INV + DN + PO)
- Not checking **Packing Slip** history before Mass Receipt.

Where in the system: Epicor -> Purchase Order (PO) -> Lines / Header (PO total)

Epicor: PO Increase Rule (10%) + SUM tip

Use this when the Finance Report / IPC value is higher than the current Epicor PO value and SRV cannot be completed.

A) When you need to increase the PO value

If the payment amount (Finance Report value) is higher than the current PO total, adjust the PO so SRV can match the payment amount. After updating qty/amount, re-check that **PO Total** and line **Extended Cost** match the Finance Report value.

B) The 10% guideline (approval rule)

As a general guideline, you can usually increase a PO up to **10% of the original PO total**. If more than 10%, follow the correct approval process (depends on PO type/company rules).
Note: the exact allowance depends on PO type. Main rule: totals must be correct and approvals documented.

C) If you need more than 10% increase: 2 options

- **Option 1 - Update the same PO (only with approval):** increase the PO value and continue on the same PO.
- **Option 2 - Create a new PO (recommended for audit clarity):** create a new PO for the additional value and close the original PO properly.

Best practice: for audit, a closed PO should stay closed. A new PO for extra value is often easier to explain and track.

D) Tip: Convert lines to SUM to make SRV easier (focus on the amount)

If a line uses pcs/m2/hours/months, SRV needs the correct quantity to reach the payment amount. Converting to SUM (lump sum) makes SRV simpler because you release value directly.
Goal: SRV amount = Qty x Unit Cost = amount you need to pay.

Example: 1 dozen = 12 pcs. PO line is **1 dozen x 120 = 120 Riyals**, but you only need to pay for **2 pcs**.

Item	Qty	UOM	Rate	Total
PO line (original)	1	Dozen	120	120
SRV (normal - same Dozen line)	2/12 = 0.1667	Dozen	120	20
Value line (optional - convert to SUM)	120	SUM	1	120
SRV (using SUM value line)	20	SUM	1	20

Remember: the goal is always the amount you need to pay. Use the method that keeps totals correct and SRV easy.

SECTION

2 Admin Handover Visual Guide

High-level workflow chart + screenshots.

Invoice System

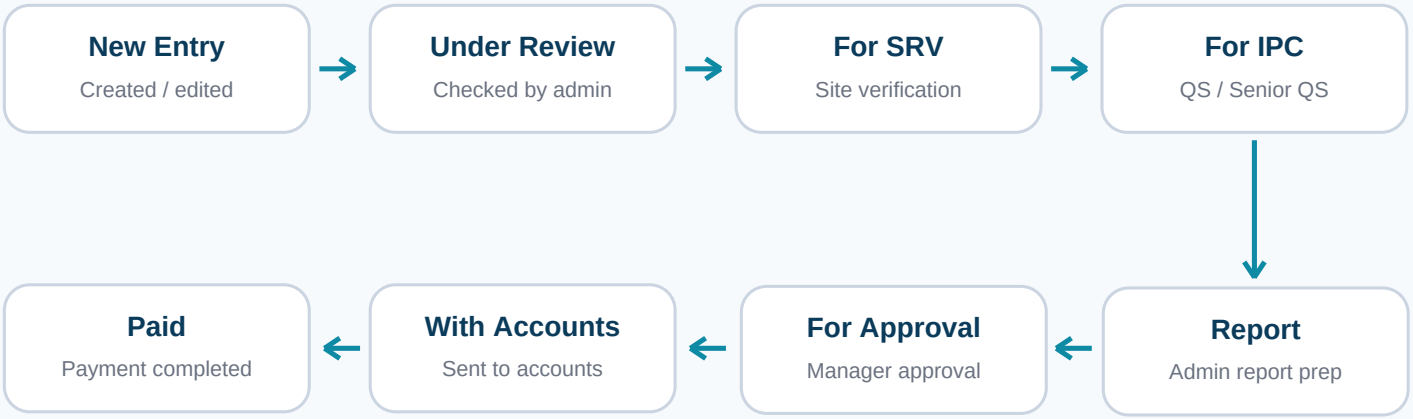
Admin Handover Guide

For vacation replacement coverage (Irwin role).

Includes workflow chart + screenshots of the exact pages you use daily.

System Version	Prepared for	Date
	Irwin (Admin)	

Workflow Overview

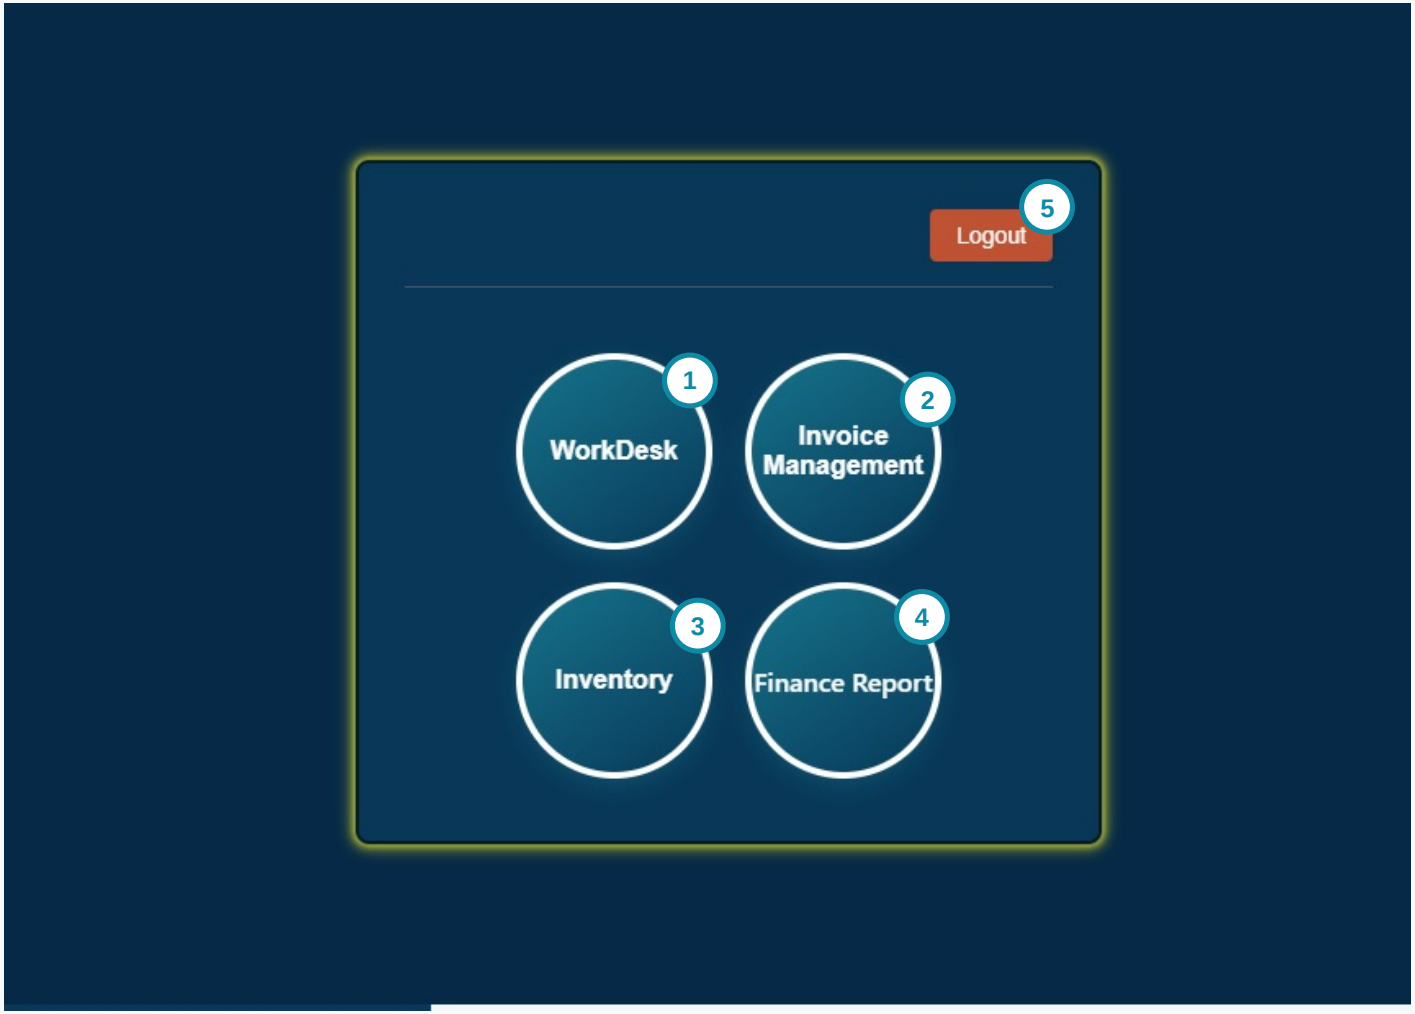


Admin (Irwin) - main responsibilities

- Monitor WorkDesk > Active Task daily and keep items moving to the next status.
- Fix missing fields (PO, vendor, site, SRV name, note), and assign Attention correctly.
- Generate Summary Notes and print previews when needed; confirm totals and the Prev Summary date.
- Export required reports (Invoice Records page) and verify counts before sending.
- Handle exceptions: duplicate invoices, wrong site/vendor, missing attachments, stuck approvals.

If something is stuck: open the invoice, confirm status + attention, then re-save and refresh.

Welcome Screen (Start Here)



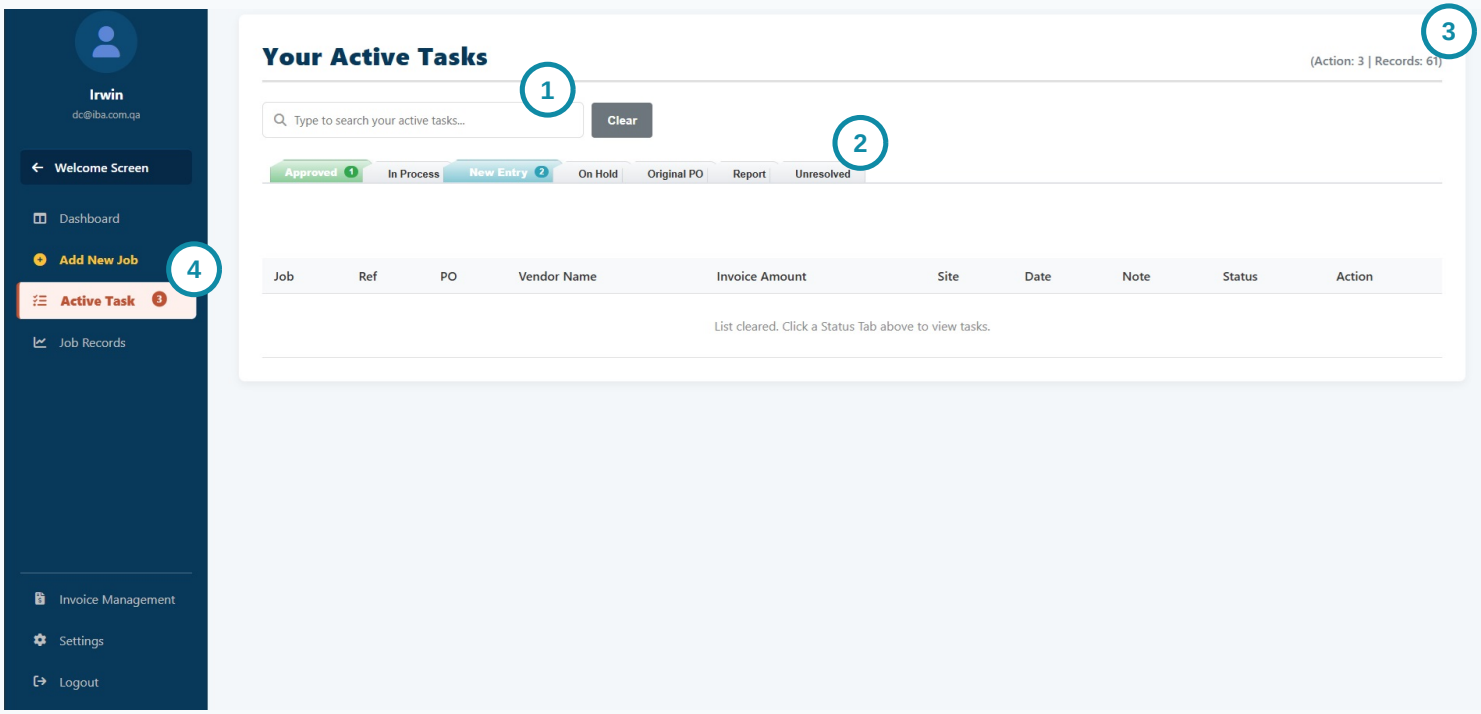
What to click / check

1. WorkDesk - daily task list (Active Task, Job Records, Add New Job).
2. Invoice Management - Invoice Entry, Batch Entry, Summary Note, Payments.
3. Inventory - material stock and transfer entries (if needed).
4. Finance Report - reporting/export area.
5. Logout - end of shift.

Daily procedure (quick)

Start every day from WorkDesk to clear urgent tasks, then move to Invoice Management for entries and summaries.

If the page feels outdated, click Refresh buttons inside pages (do not hard refresh unless necessary).



What to click / check

1. Search - quickly find a PO/vendor/site inside your current tab.
2. Status tabs - click each tab to load tasks in that stage (New Entry, Report, Unresolved, etc.).
3. Record count - confirm the page loaded (Records number changes).
4. Active Task menu - this is your main queue for daily follow-up.

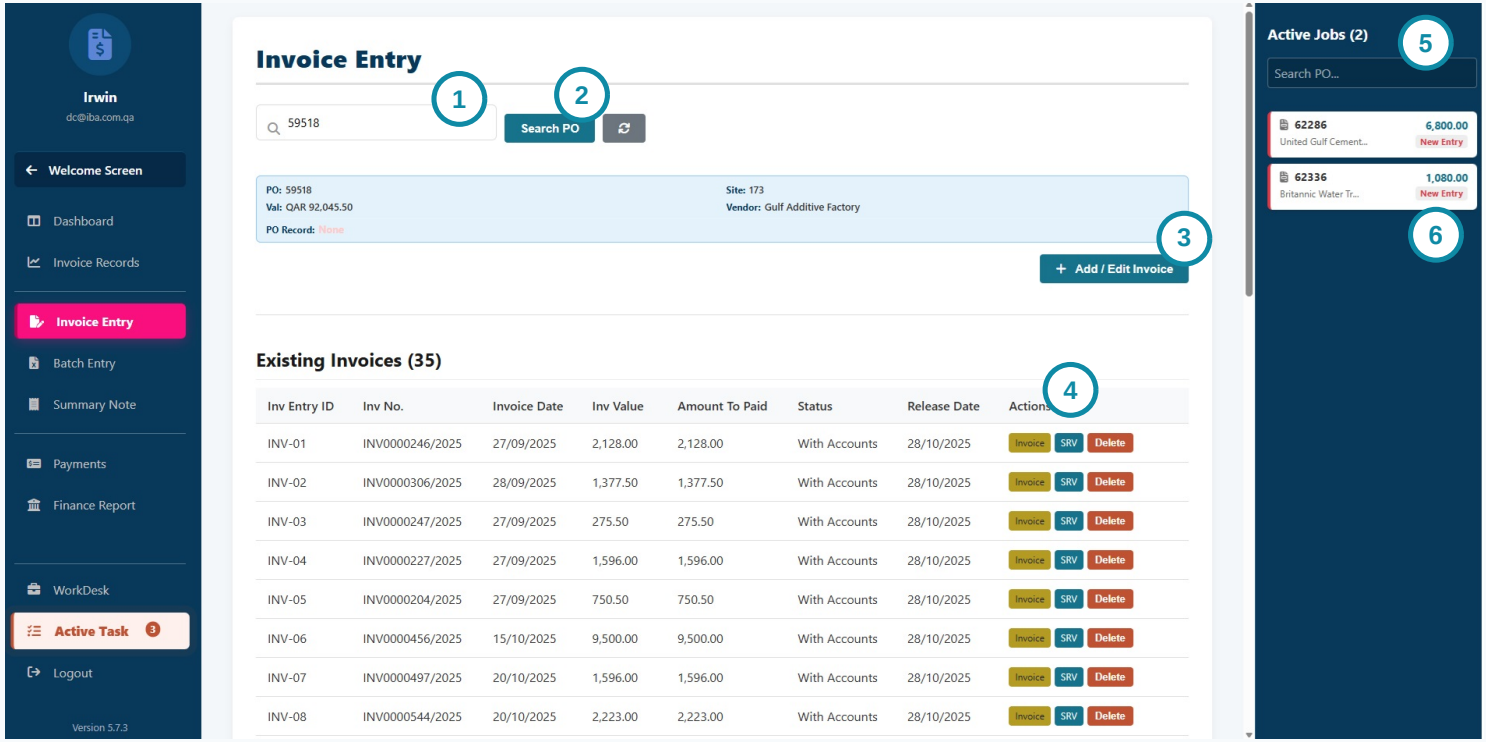
Daily procedure (quick)

Goal: keep items moving forward. Open each tab, clear what you can, and assign correct Attention.

If tasks list is empty, click a tab again or press Clear then re-select the status tab.

Screenshots match your current UI layout. If the layout changes, update this guide.

Invoice Entry (Single PO)



What to click / check

1. Enter PO then click Search PO to load vendor/site and existing invoices.
2. Search PO button - do not rely on Enter here (use button).
3. Add/Edit Invoice - create new or update invoice lines for this PO.
4. Actions (Invoice/SRV/Delete) - open invoice details, SRV step, or delete wrong entry.
5. Search PO Button - type PO and it will show you that exact po for new invoice entry
6. Active Jobs (Invoices) - All invoices received by reception will be list here

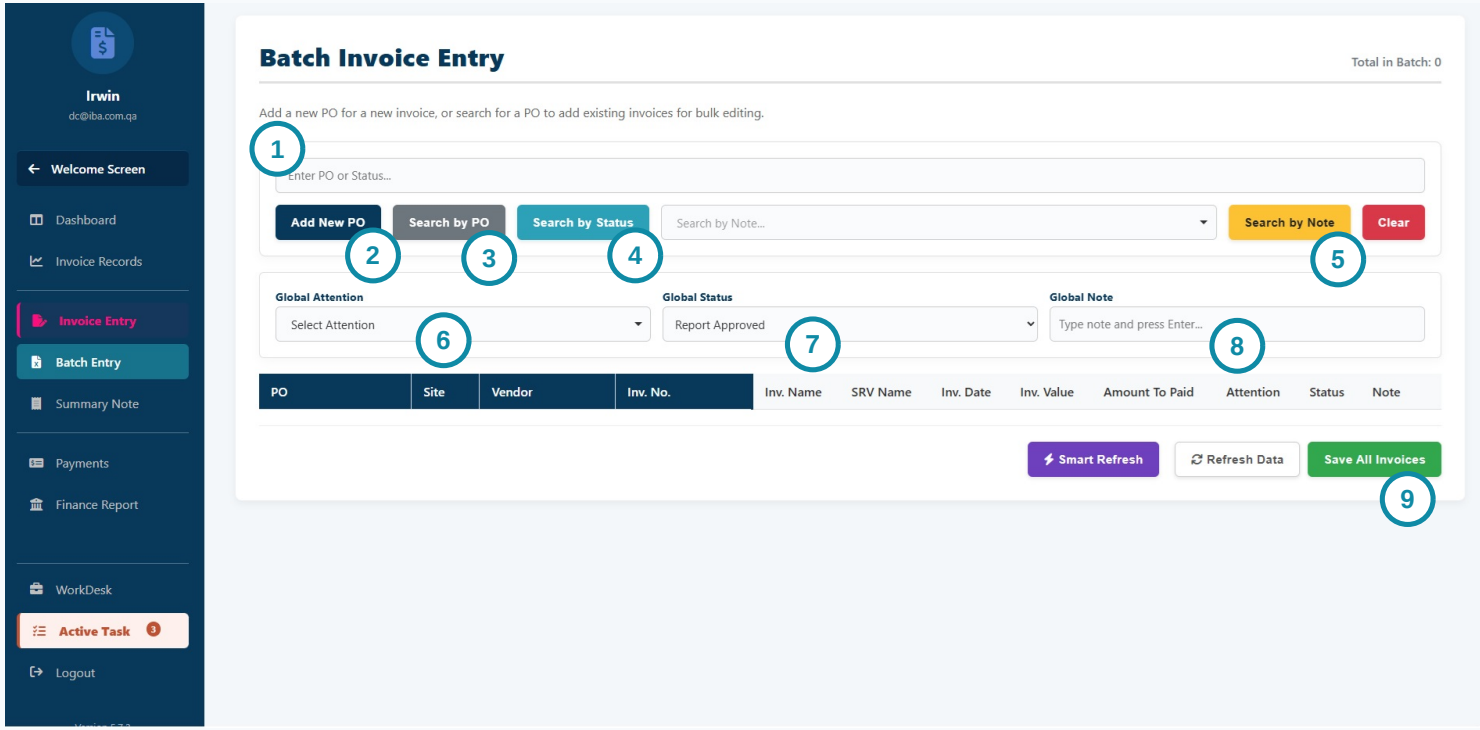
Daily procedure (quick)

After saving an invoice, verify Status and Release Date are correct in the table.

If duplicate invoice numbers appear, open the older one and fix/delete before moving status.

Screenshots match your current UI layout. If the layout changes, update this guide.

Batch Invoice Entry (Bulk Edit)



What to click / check

1. Enter PO or Status field - Press Enter here adds a NEW PO row (not search).
2. Add New PO - same as Enter: adds new PO row for bulk entry.
3. Search by PO - click to load a PO into batch mode.
4. Search by Status - click to load invoices by status into batch mode.
5. Search by Note - click to load invoices by Note into batch mode.
6. Global Attention - sets attention for all rows; typing a name can override filters (vacation coverage).
7. Global Status - set status for all rows; verify before Save All.
8. Global Note - sets Note for all rows; typing a name can override filters
9. Save All Invoices - commits batch changes.

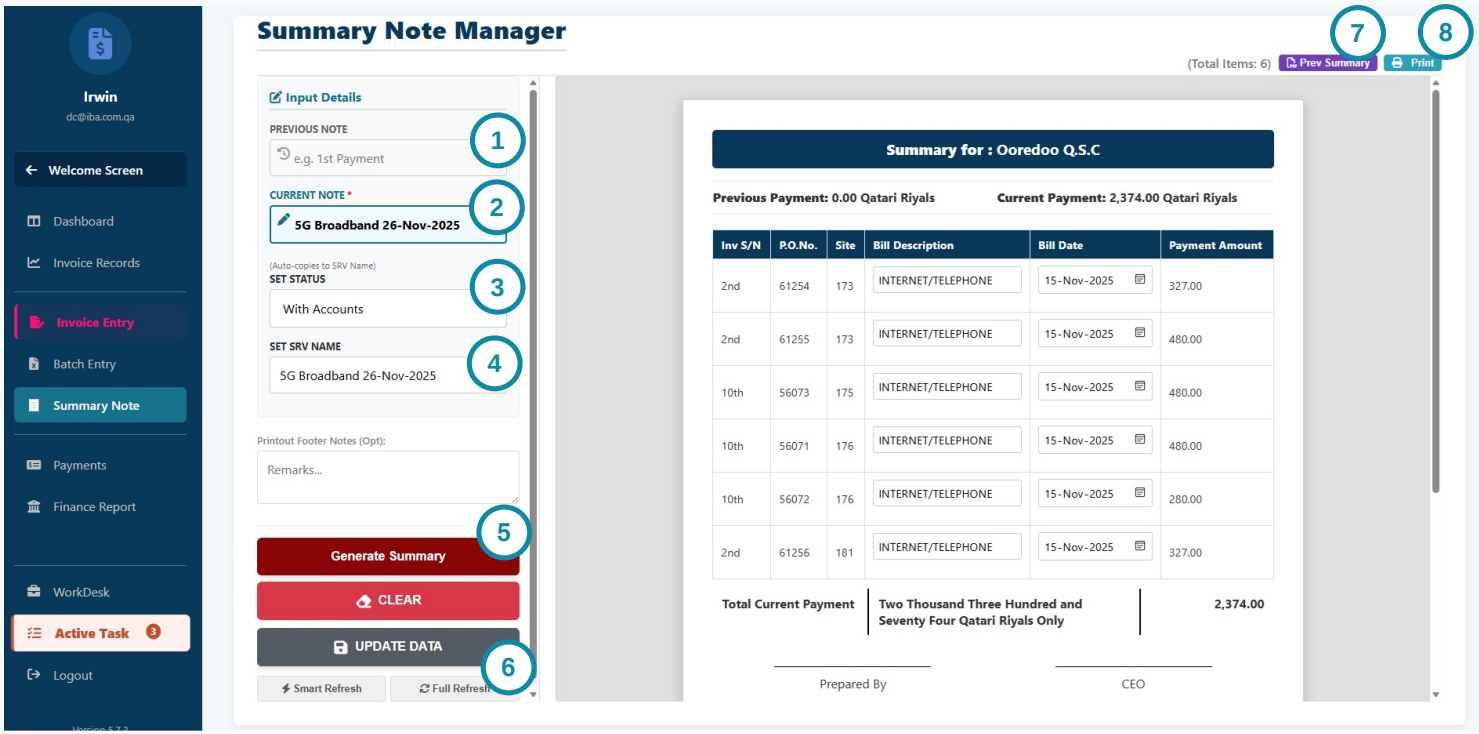
Daily procedure (quick)

Use batch for fast updates: set Global Status + Attention, then Save All.

If the correct person is not in the auto-filter list, start typing their name - it will show matches from ALL approvers.

Screenshots match your current UI layout. If the layout changes, update this guide.

Summary Note Manager (Payment Summary)



What to click / check

1. Previous Note - link to earlier payment summary (for history).
2. Current Note - title of the summary you are preparing.
3. Set Status - typically With Accounts when sending to accounts.
4. Set SRV Name - this is auto generated
5. Generate Summary - refresh the preview after any edits.
6. Update Data Button - will only be click if summary is approved by CEO
7. Prev Summary - shows previous summary with its actual completion date.
8. Print - open print preview for signature/sharing.

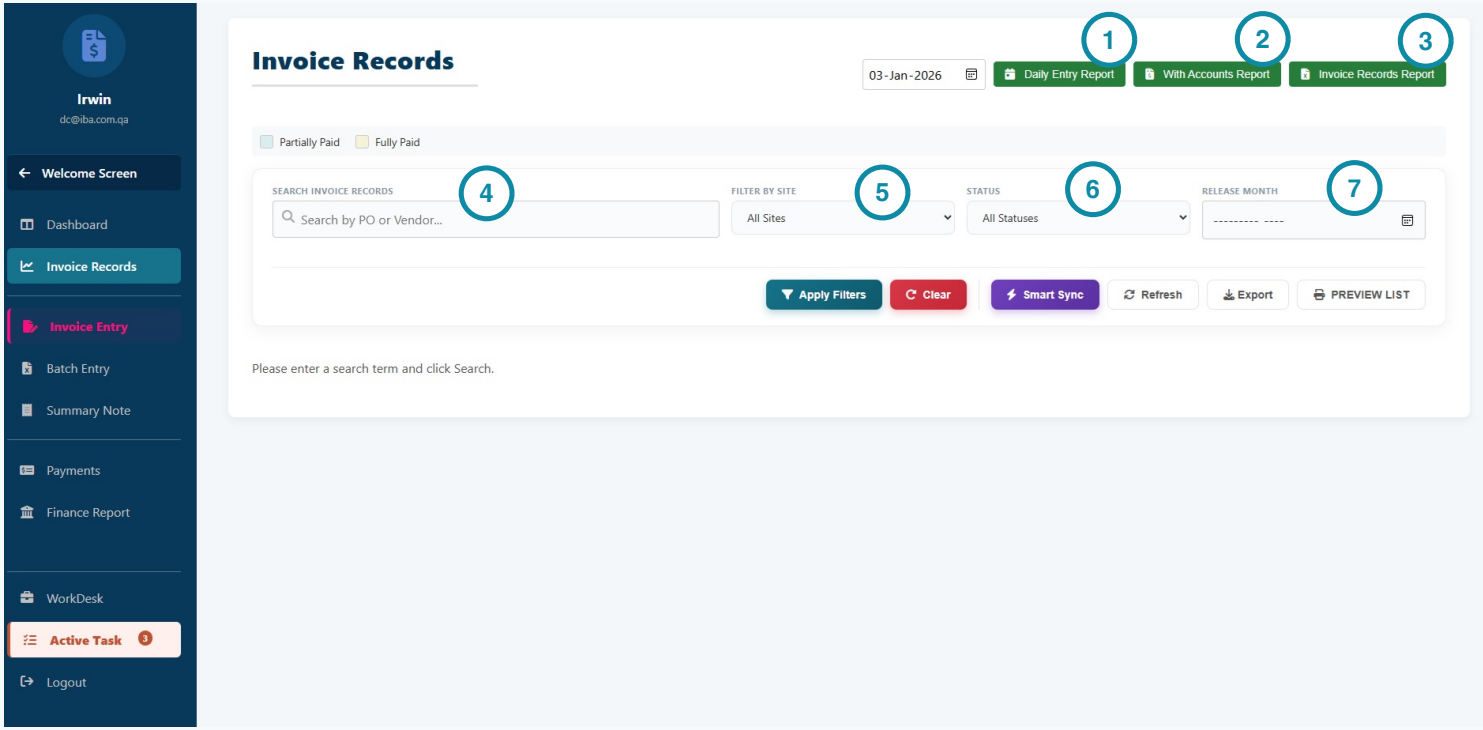
Daily procedure (quick)

Before printing: confirm total, list items count, and correct Current Note title.

Prev Summary date should reflect when the previous note reached With Accounts/Paid.

Screenshots match your current UI layout. If the layout changes, update this guide.

Invoice Records (Filters + Reports)



What to click / check

1. Daily Entry Report - last 2 hours, status **Under Review** (per your setup).
2. With Accounts Report - last 2 hours, status **With Accounts**.
3. Invoice Records Report - last 2 hours, status **Report Approved**.
4. Search + filters - PO/vendor search, site filter, status filter, release month.
5. Apply Filters - filtering by sites
6. Fillter Status - filtering by status
7. Filter Dates - filtering by month/year

Daily procedure (quick)

Always Apply Filters before Export or Preview List.

If a report returns empty unexpectedly, confirm the invoices have the exact status text and timestamps were updated within 2 hours.

Screenshots match your current UI layout. If the layout changes, update this guide.

SECTION

3 Admin Job List Table

Checklist-style responsibilities and notes.

Admin (Irwin) - Job List and Responsibilities

checklist to run the invoice workflow during Irwin's vacation.

#	Job / Responsibility	When	Where in System	What to do (short steps)	Output / Done When	Your Manual Notes
1	Start-of-day check	Daily (AM)	WorkDesk -> Active Task	Review counts per tab/status; check urgent/overdue items.	You know today's workload + priorities.	
2	Confirm new entries coming in	Daily	WorkDesk / Invoice Entry	Check 'New Entry' and 'Under Review' queue; confirm PO/site/vendor are correct.	No missing invoices; no wrong site/vendor.	
3	Create or update invoice (single)	As needed	Invoice Entry	Search PO -> Add/Edit Invoice -> verify amounts/date/status/attention.	Invoice saved correctly.	
4	Bulk edit invoices (batch)	Daily	Batch Invoice Entry	Add New PO (Enter) -> edit rows -> apply global status/attention/note if needed -> Save All.	Batch saved with correct status/attention.	
5	Set correct Attention per status	Daily	Batch Entry / Invoice Entry	Use auto-filter suggestions; if replacement needed, type name to override.	Invoice has correct owner (attention).	
6	Under Review processing	Daily	WorkDesk / Invoice Entry	Validate invoice details + documents; update note; move to next status (SRV/IPC/etc.).	Invoice ready for next role.	
7	SRV stage coordination	Daily	WorkDesk / Invoice Records	Ensure SRV invoices go to correct SRV/site; follow up on delays.	SRV done or followed up.	
8	IPC stage coordination	Daily	WorkDesk / Invoice Records	Ensure IPC invoices go to QS/Senior QS; follow up delays.	IPC completed.	
9	Approval stage coordination	Daily	WorkDesk / Invoice Records	Track 'For Approval'; remind approver/manager if stuck.	Approval completed.	
10	Report stage checks	Daily	WorkDesk / Invoice Records	Verify 'Report' items; ensure documents/notes correct.	Ready to become Report Approved.	
11	Move to 'With Accounts'	Daily	Invoice Entry / Summary Note	Update status to With Accounts when appropriate.	Accounting queue prepared.	
12	Create Summary Note (Current)	Daily / When needed	Summary Note Manager	Set Previous Note + Current Note + Status + SRV name -> Generate Summary.	Summary shows correct list + totals.	
13	Print Summary Note	When needed	Summary Note Manager -> Print	Preview, confirm totals, print/export PDF.	Printed document is correct.	
14	Verify 'Prev Summary (DATE)' meaning	When needed	Summary Note print preview	Confirm date matches completion date of previous note.	Correct audit trail.	
15	Payment update tracking	Daily	Payments / Invoice Entry	Mark paid/partial; update payment note/date.	Payment status matches reality.	
16	Fix wrong status / wrong attention	As needed	Invoice Entry / Batch Entry	Correct status, attention, note; re-save.	Invoice is back on correct path.	

#	Job / Responsibility	When	Where in System	What to do (short steps)	Output / Done When	Your Manual Notes
17	Handle duplicates	As needed	Invoice Entry / Records	Identify duplicate inv no/PO; delete or mark note.	No double-counting.	
18	Handle missing PO / missing vendor	As needed	Invoice Entry	Verify PO exists; fix vendor/site fields.	Data complete.	
19	Resolve 'Unresolved' items	Daily	WorkDesk -> Unresolved	Read notes, find missing info, assign to correct owner.	Queue is clean.	
20	Use Invoice Records filters (investigation)	Daily	Invoice Records	Filter by site/status/month/search; Apply Filters; Preview List.	You can explain status of any invoice.	
21	Export Daily Entry Report	Daily	Invoice Records	Click Daily Entry Report (last 2 hours + correct status).	Excel exported successfully.	
22	Export With Accounts Report	Daily	Invoice Records	Click With Accounts Report (last 2 hours + status).	Excel exported successfully.	
23	Export Invoice Records Report	Daily / Weekly	Invoice Records	Click Invoice Records Report (last 2 hours + Report Approved).	Excel exported successfully.	
24	End-of-day status sweep	Daily (PM)	WorkDesk / Invoice Records	Check anything stuck; update notes; handoff pending items.	Replacement knows what's pending.	
25	Quick handover note	Daily (PM)	Manual	Send summary: urgent POs, stuck approvals, SRV/IPC pending, paid updates.	Smooth next shift.	
26	Maintain approvers list	When changes happen	Settings / Approvers	Add/remove staff; update roles/sites.	Correct people show in attention lists.	
27	Maintain project sites	When changes happen	Settings / Project Sites	Add new site; fix site names/codes.	Searches + filters accurate.	
28	Fix permission/connection errors	As needed	System / Console	Identify if rules/auth/project mismatch; correct config/rules.	System writes work again.	
29	Monitor data quality	Weekly	Records / Entry	Spot-check random invoices for fields/notes/status correctness.	Fewer downstream issues.	
30	Backup/export important reports	Weekly / Monthly	Invoice Records / Finance Report	Export key reports; store copy.	Historical trace kept.	

Additional Manual Notes

Use this page for any procedures that are not covered in the checklist above (contacts, special cases, recurring issues, etc.).

Monthly Subscription SRV for the Year 2026

1. **Kahramaa 2026 (Set of 1 Year)**

   Site 100 - PO 62455

2. **Mobile Aamali Ooredoo 2026 (Set of 1 year)**

   Site 100 – PO 62456

   Site 123 – PO 62457

   Site 137.19 – PO62458

   Site 140 - PO 62459

   Site 144 – PO 62460

   Site 166 – PO 62461

   Site 169 - PO 62462

   Site 173 – PO 62463

   Site 175 – PO 62464

   Site 176 – PO 62465

   Site 181 – PO 62466

   Site 1111 – PO 62467
